Stabilised chlorine tablets are slow dissolving & contain the stabiliser Cyanuric Acid. Cyanuric Acid protects free chlorine lost due to sunlight (UV light) onto the water, making stabilised chlorine products ideal for Outdoor Pools.

Levels of Cyanuric Acid should not exceed 100mg/l. Above this level you may create a condition the industry calls "chlorine-lock", reducing the effectiveness of free chlorine.

The Cyanuric Acid level can only be reduced by dilution of pool water, & it is essential to monitor this level regularly.

Cyanuric Acid Testing Kits are available on page 107.

Sodium Hypochlorite (UN 1791)

Code	Description	Pack Size	Price	
C09-20	Sodium Hypochlorite <i>Non-returnable plastic drums</i>	20 litre	18.50#	Liquid Chlorine 14/15% available chlorine w/w
